

The BON4M

Every BON4M, BON4Msmall and BON4Mplus comes with standard 4 different sizes of Stainless Steel “Hinged” or “Solid” back-rings.

The BON4M series will be delivered in a discreet hard paper box with inside a black velvet pouch that contains your purchase.

You'll notice inside the pouch a cage attached to one of the back-rings and locked with a BON4 brass (coated) pad lock. First you'll need to find out which of the 4 ring sizes will fit you best. Put your testicles through a chosen ring size (in case of the solid rings add some Vaseline or olive oil) followed by your penis. Check the fit for comfort and security. If necessary repeat this process with a different back-ring to select the best fitting. Adding some lube inside the ring or putting some baby/talcum powder on your skin might offer some relief.

The BON4M Series is relatively easy to put on. Take the cage and hold it to your chosen ring size. There are not many parts to choose from and all you need to do is put the locking pin through the holes of the ring and the cage and assemble the device.

Then simply put the 15mm (coated) brass padlock through the hole and lock the device.

You can clean a BON4M while wearing it or when you shower, urinating with the device on is no problem.

Although the BON4M Series is produced in good quality (sus 304) Stainless Steel we still advice to keep your device clean and dry.

Hand over the keys to your key holder and enjoy.

Note: Since August 2015 All BON4M cages come with 5 unique numbers laser engraved.

These numbers are kept in our database and guarantee our customers an original BON4.
